The Technology of Living

SOUNDWAVES CUSTOM HOME INTEGRATION

Simplicity, flexibility, and control are the hallmarks of the seamless technology of a well-designed integrated system in today's digital home. SoundWaves Custom Home Integration uses the art of engineering to bring modern technology into your home with elegance and functionality.

We are a custom design and installation firm that provides home integration and technology solutions. Our offerings include a wide array of essentials such as high-definition audio & video, custom home theaters, as well as outdoor solutions. We also specialize in smart solutions, such as home automation, shades & lighting, networking, and surveillance.

Our friendly, extremely knowledgeable team is comprised of the finest custom integrators in the region. From your project's planning phase to the installation, SoundWaves prides itself on providing an excellent and easy experience for each client.

Bring us the technology vision for your home. We look forward to helping you achieve it!

Sincerely,
Joe DeMarco

Solutions for Every Need & Idea

SMART Home.

In a fast-paced world, your home life should be easy, relaxed and efficient. Spend less time doing, more time with family and friends, pursuing what you enjoy most.

At the Touch of a Button.

Create mood lighting for morning, noon and night. Stream a favorite playlist when preparing dinner, while the kids watch TV. Say 'goodnight' and put the whole house to sleep. All with one easy touch.

Your Unique Experience.

In a smart home, everything is personalized based upon your preferences and schedules. Life is simple, comfortable and in sync! You're on the path to perfect living.

Shades & Lighting

Smart Shades and Lighting

Controlling lights and shades is what makes a home complete, both aesthetically and operationally. In today's contemporary home, lights and shades can easily be managed via one keypad or remote, and integrated as part of a larger home automation system.

Automated Shades

Automated shades offer a host of benefits and complement a whole-house control system. Block the sun and give your home complete privacy with a touch of a button. Programmable shades are ideal for large, hard-to-reach windows, while saving time and energy.

Shading Designs

From traditional to modern, there are striking shading designs to fit every decor, including sheer and wood blinds; Roman and vertical drapery; as well as roller, honeycomb, and tensioned shades.

Efficient Lighting

Program lights for one room or the entire house, for efficiency and ease. Automatic sensors turn off lights when you exit the house or a room, saving energy and cost. Dimmers always create the perfect ambiance.

Audio

High Performance Audio

It could be a magical act at Radio City Music Hall...or a rockin' night at the Fillmore. But the high-performance here is the audio installed in your very own living room, and the quality and clarity of today's audio brings the concert experience home to you.

Exceptional Sound

Ready for an extraordinary music experience in your home? Audio systems include powerful amplifiers, crystal clear speakers, and subwoofers that deliver deep bass sounds. Speakers are available in all shapes and sizes, visible and 'invisible.'

High-Quality Components

Incredible home audio begins with a good foundation, including pre-amp/processors, that translate audio from a high-resolution audio player or media streamer. High-quality cables ensure the purest sound, eliminating external interference.

Vintage to Digital

Whatever your style, you can create an extraordinary home music experience. Digital-to-analog converters transform digital music into the highest quality sounds. Or, add a luxe new turntable. Vintage vinyl is back and it's attracting all generations of enthusiasts.

Audio & Video Systems

Audio & Video for the Whole Home

Exceptional music and video experiences are what we seek for the heart of our homes. And technology offers incredible opportunities to seamlessly – and invisibly – integrate your home with brilliant, high-quality sound and video.

Whole Home Systems

A whole home system simplifies everything. Instead of a different device in every room, there is a central system source each, for audio and video. Speakers come in a wide range of shapes and sizes, providing quality sound wherever desired.

Entertainment, All the Time

Decide which movie to watch, what playlist to turn-up, from any room in the house, and it's ready to go. All your entertainment is easily controlled from your phone, tablet or chosen specialty remote.

Music, Easy and Everywhere

Easy, fun, everywhere. It's today's music listening experience. High-quality speaker systems enable you to connect and stream your favorite tunes via WiFi or Bluetooth. Use an app to easily manage the music by location and device.

Home Theater

The Ultimate Home Theater Experience

Movies provide escape, inspiration, and influence on how we view the world. Dedicating a space in your home for a theater is an awesome experience for yourself, friends and family alike to come together and experience movies, watch a favorite TV series, or catch the latest game.

Projection & Audio

Customize your home theater with surround sound, sub-woofers and the perfect speakers. The latest projectors are smaller and quieter, offering first class picture quality and an extraordinary theater experience.

Life-size Screens

Customized home theaters with cinema-style video are available for spaces of all sizes, with big screens that range from 90" to 250". Choose from LCD, OLED or video projection based on the size of the room and seating location.

Style & Comfort

Stylish, comfortable cinema chairs add to the authenticity of the movie experience, available in a range of fabrics or leather. Now, let the magic of the movies and the advantage of your own theater space take over.

Outdoors

Entertain Outdoors, Exceptionally

From pool parties and casual BBQs to sophisticated soirees, entertaining outdoors takes on a new level of ease – and pleasure – when the backdrop offers superior audio and video, as well as ambient lighting.

All-Weather Audio

When relaxing by the pool, groove to your favorite music, with crystal clarity. Click and stream your favorite playlist from a wireless device. All-weather speaker options come in a range of sizes and options and blend invisibly into outdoor surroundings.

Outdoor Video

Plan a summer movie party, projecting shows on a large outdoor screen or watch on an all-weather television. Offering excellent image quality, these screens are designed specifically to withstand the elements.

Ambiance Lighting

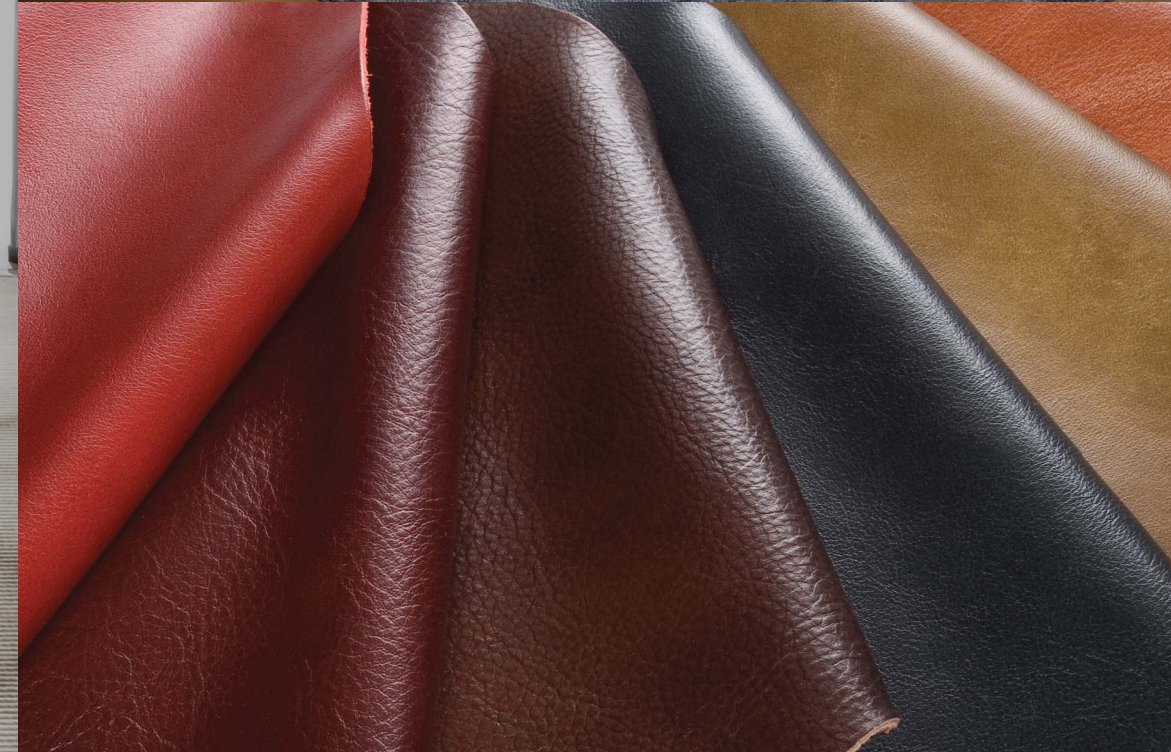

Lighting gives evening entertaining a new dimension. Whether your style is enchanting, classic or bold, smart outdoor lighting uses tiny, powerful LEDs to set the mood you want and can be controlled at a touch of a button.

Style & Design

Designs with Style and Grace

From sleek lines to custom colors, prepared to be wowed by the aesthetics of home automation. Customize the design, deciding how much of the system is showcased, and what portions seamlessly disappear into the rest of your home. Choose from traditional or more contemporary styles. Select a 4K flat television that can be seen, or one that blends into the walls as a painting or mirror. Amaze guests with flawless surround sound from speakers artfully blended into the room. Utilize audio lift and mounts to create a movie theatre environment in mere seconds. Stylish, custom-made furniture is the finishing touch.

Home Automation

The Everyday Home, Made Easy with Automation

Daily tasks become effortless and efficient with home automation, saving money and freeing up your time to do what is most important. Through a simple app on your smartphone and tablet, or from a whole home remote, control the many features of your house almost anywhere, anytime.

Programmed Sequences

With the touch of your remote, you can control multiple devices for any activity. As the sun rises, set an alarm, brighten the breakfast room's lights, open the window shades and turn on the morning news. The possibilities are endless.

Lighting Scenes

The right lighting provides the perfect ambiance to what ever you're doing. Whether it's warmly lit accent lighting for a romantic dinner, or a bright scene to show off your new kitchen, different lighting scenes make it easy to set the perfect mood.

Safe and Sound

Using a single command you can arm your entire security system, and have instant access to all your surveillance cameras to keep an eye on everything. It can even prepare for your arrival by disarming the alarm, unlocking the door, adjusting your thermostat and lighting your way into the house.

Use your Voice to Control

The beauty of voice command is that there is no learning curve. With most home automation systems, there is an option to add on a voice activation product, enabling you to control all your devices completely by voice. Simply tell your smart device what needs to be accomplished. And just like that - it's done.

Home Networks

State-of-the-Art Networks

The key to creating an excellent smart home internet experience? Designing a state-of-the-art network that supports multiple devices operating simultaneously – from smartphones and iPads to movies and streaming music. By choosing one that is optimized and reliable, you'll receive high-speed connections without any lag time.

Your home network also needs to be secure. It's of utmost important to protect all your devices and information throughout your entire property with the highest level of encryption.

Home Security

The Smart Home is the Safest Home

With smart technology, comes worry-free living – no matter where you are. Homeowners are now opting for the ease of wireless, low-profile security systems, which instantly provide alerts and incredible detail when issues arise. Be safe, secure and in control.

Advanced Security

Today's smart systems offer options for sirens, audio and video. These smart devices can sense when windows are opened or closed, as well as any motion in your house. Be alerted immediately to security breaches and access detailed information via an app.

Smart Home Detectors

Additional customizable home safety features include smart thermostats and detectors for carbon monoxide and smoke. Monitor your plumbing systems for leaks, signs of mold, and detect floods caused by storms.

Vacation Anywhere

The best part is you have total control. Vacation anywhere, knowing that anytime you can tap a mobile app and visually check on the status of your home's security, adjust lighting and temperature, and know that all is well.
